PEXAGON PRESENTS ALL-IN-ONE LANYARD FLASH DRIVE.

Pexagon Technology starts shipping their exclusive new Lanyard Flash Drive design.

Guilford, CT June 28, 2009 – Pexagon Technology, a leading supplier of personalized flash drives in the US, announced their brand new Lanyard USB Flash Drives are now available for shipping. The exclusive design has been a shining star among new educational product offerings.

The well thought out flash drive design is in direct answer to requests and feedback Pexagon has received from their many education customers. Teachers and school administrators were looking for durable drives that were not only portable, but cap-less, tough to lose, and personalized with both school name or logo and student names for identification purposes.

Features of the Lanyard Drive include a COB (chip on board) flash drive, a form factor that is smaller than the standard silver-collared USB drive many are used to seeing. The drive snaps into a metal housing at the bottom of the neck lanyard. A breakaway strap is provided for safety, and an extra key ring is included on the neck portion of the lanyard. The shorter, attachable piece houses the flash drive and includes a metal tag for engraving, and a clip for other attachments such as student IDs, keys, or school badges. Capacities range from 1GB to 32GB.

Schools are requiring more and more students to carry flash drives for homework and in-class applications. Couple that with the need for schools to provide some type of student ID for security measures and the lanyard flash is a legitimate solution. "Designed specifically with the education market in mind, this new lanyard flash drive is a logical blending of technologies," said Brian Campbell, president of Pexagon Technology. "Built for ongoing and extended use applications, it's reasonable to expect that a student could carry the same flash drive with them throughout four years of high school or college."

Personalization, a service for which Pexagon is famous, can be achieved in several ways. School spirit can be displayed with the school name/logo screen printed on the neck lanyard. Offering a choice of 8 popular school colors, the school's branding can further be promoted. A metal dog tag attached below the actual flash drive can be laser engraved with the school name and or individual student's names for the ultimate personalization.

As education embraces the technology world, more and more schools are moving to using flash drives, issuing them to incoming freshman and teachers preloaded with handbooks, school orientation information or teacher reference materials.

Pexagon, long a provider of personalized flash drives for school fundraising, also offers a prepaid card for the Lanyard Flash Drive line. Available for school book stores, events or libraries.
